

MANU MARTUND

Pune, Maharashtra, India | +91 9970130735 | manumartund98@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Cloud & Application Support Engineer with 4 years of AWS/Azure cloud operations and production support experience, backed by 6 years of overall professional experience. Hands-on with EC2, S3, IAM, VPC, CloudWatch, Azure VMs, Storage Accounts, Linux, monitoring, incident handling, access management, and deployment support. Comfortable working with application, DevOps, and infrastructure teams to troubleshoot issues, support releases, improve monitoring, and keep business-critical systems reliable.

TECHNICAL SKILLS

Cloud Platforms: AWS: EC2, S3, IAM, VPC, CloudWatch, Auto Scaling, Load Balancer; Azure: Virtual Machines, Storage Accounts, VNet, Azure AD, AVD basics.

Monitoring & Logging: CloudWatch metrics/logs/alarms, Azure Monitor, Prometheus, Grafana, Node Exporter, log analysis, alerting.

DevOps & Automation: Git, GitHub, Terraform basics, CloudFormation basics, CI/CD concepts, Jenkins basics, Docker basics, Kubernetes concepts.

Networking & Security: VPC, subnets, route tables, internet gateway, NSG, VPN basics, IAM policies, RBAC, least privilege access.

Operating Systems, Scripting & Programming: Linux administration basics, Windows Server basics, Bash/Linux commands, Python basic scripting, Java basics, JavaScript, HTML, CSS, Firebase, Firestore.

ITSM & Delivery: Incident management, RCA, change support, SLA tracking, documentation, Agile/SDLC, stakeholder coordination.

PROFESSIONAL EXPERIENCE

Freelance Cloud & Web Project Developer | Jan 2026 – Present | Pune, India

- Developed and delivered a web-based Gated Society Work Tracking Dashboard to help residents and society management track incomplete maintenance and repair work.
- Built issue logging, status update, and tracking workflows for pending, in-progress, and completed society work.
- Used HTML, CSS, JavaScript, Firebase, and Firestore to create a simple cloud-backed issue tracking system.
- Shared the dashboard with society stakeholders, collected feedback, and refined the solution before approval.
- Improved visibility of unresolved maintenance issues and made follow-up easier for residents and society management.
- Troubleshoot development issues related to Firebase setup, Firestore permissions, API enablement, database configuration, and frontend integration.

IDFC FIRST Bank — Cloud Operations Support | Sep 2023 – Jan 2026

- Supported 99.9% uptime-focused production operations for enterprise banking applications, assisting with incident response, monitoring, SLA adherence, and operational reliability.
- Analyzed CloudWatch logs, metrics, alarms, and dashboards to troubleshoot production alerts, identify recurring issue patterns, and support faster incident resolution.
- Improved incident investigation efficiency by ~25% by documenting recurring troubleshooting steps for CloudWatch alerts, IAM access issues, EC2 checks, and escalation workflows.
- Handled recurring infrastructure and access support requests involving IAM permissions, EC2 health checks, monitoring alerts, and AWS resource utilization reviews.
- Coordinated with 3+ teams across application, infrastructure, DevOps, and security functions to resolve production incidents, support RCA, and manage escalations.
- Reduced repeat investigation effort by ~20-25% through reusable troubleshooting notes, RCA inputs, and documented escalation workflows.
- Supported change management and production release activities in a controlled BFSI environment with focus on compliance, service continuity, and rollback readiness.

ETTL — Cloud Engineer / Cloud Operations Support | Mar 2022 – Aug 2023

- Supported Azure migration activities for on-premise file storage during a 1.5-year cloud operations assignment, assisting with access validation and post-migration checks.
- Worked across Azure VMs, Storage Accounts, basic networking, Azure Monitor, permissions, and connectivity checks to support cloud infrastructure operations.
- Improved post-migration validation accuracy by ~25% by following structured checks for storage access, permissions, connectivity, and availability.
- Reduced manual verification effort by ~20% through reusable validation notes and operational documentation for Azure VM, Storage, and monitoring checks.
- Created operational documentation covering deployment steps, validation checks, troubleshooting notes, and support workflows.

ETTL — Mechanical Engineer | Jan 2020 – Jan 2022

- Prepared technical reports and coordinated with engineering teams for quality assurance, compliance checks, and structured documentation.
- Built transferable strengths in process discipline, stakeholder coordination, documentation, and analytical problem solving.

PROJECTS

AWS DevOps Monitoring Platform — AWS EC2, Linux, Prometheus, Grafana, Node Exporter

- Deployed an AWS EC2-based monitoring stack using Prometheus, Grafana, Node Exporter, and Linux to track 5+ key server metrics including CPU, memory, disk, uptime, and service availability.
- Reduced manual server health-check effort by ~30% in a hands-on AWS monitoring project by centralizing CPU, memory, disk, uptime, and service metrics in Grafana dashboards.
- Configured monitoring for 5+ system metrics using Prometheus, Node Exporter, and Grafana to improve observability on a test EC2 instance.
- Documented 20+ AWS/Linux setup and troubleshooting commands covering EC2 access, package installation, service management, security group validation, and monitoring setup.

Additional Cloud & DevOps Projects — GitHub

- Built a Firebase-based web dashboard to create, track, and update civic issue records using HTML, CSS, JavaScript, and Firestore.
- Implemented issue creation and status tracking workflows, improving hands-on understanding of frontend deployment and cloud database integration.
- Troubleshoot 5+ development issues including Firestore permissions, API enablement, database setup, MIME type errors, and local hosting constraints.
- Designed practice architectures using EC2, Auto Scaling, Load Balancer, VPC, S3, RDS, IAM, CloudWatch, and Lambda.
- Configured S3 lifecycle, replication, and event-driven Lambda workflows while preparing for AWS Solutions Architect Associate.

CERTIFICATIONS & TRAINING

- Post Graduate Program in Cloud Computing — Caltech CTME / Simplilearn, 2023
- AWS Solutions Architect Associate SAA-C03 — exam preparation in progress
- Microsoft Azure Infrastructure Solutions AZ-305 — learning path completed
- AWS Solutions Architect SAA-C03 — learning path completed

EDUCATION

B.Tech — Mechanical Engineering, Symbiosis International University | 2019

KEY STRENGTHS

- Production support mindset
- Cross-team coordination
- Cloud troubleshooting
- Clear documentation
- Fast learner with practical hands-on focus
